

## Clean-tech and Renewable Energy

Globally, a lot of emphasis is being laid on Green and Clean Technology to protect environment and mitigate climate change. Major companies are working incessantly to develop products and technology that reduce carbon emission and improve carbon foot-prints.

We at SGS have worked diligently over the past few years and have developed Fuel Additives that can be used for all types of fuels including Petrol, Diesel and Aviation.

These Products increase fuel efficiency by 20-30% and reduce carbon emissions by 30-35% besides increasing Engine life-span and decreasing maintenance costs.

We are looking for opportunities to work with big Corporations and help in the endeavour to leave a cleaner earth for the future generations.
